Threads Continued!

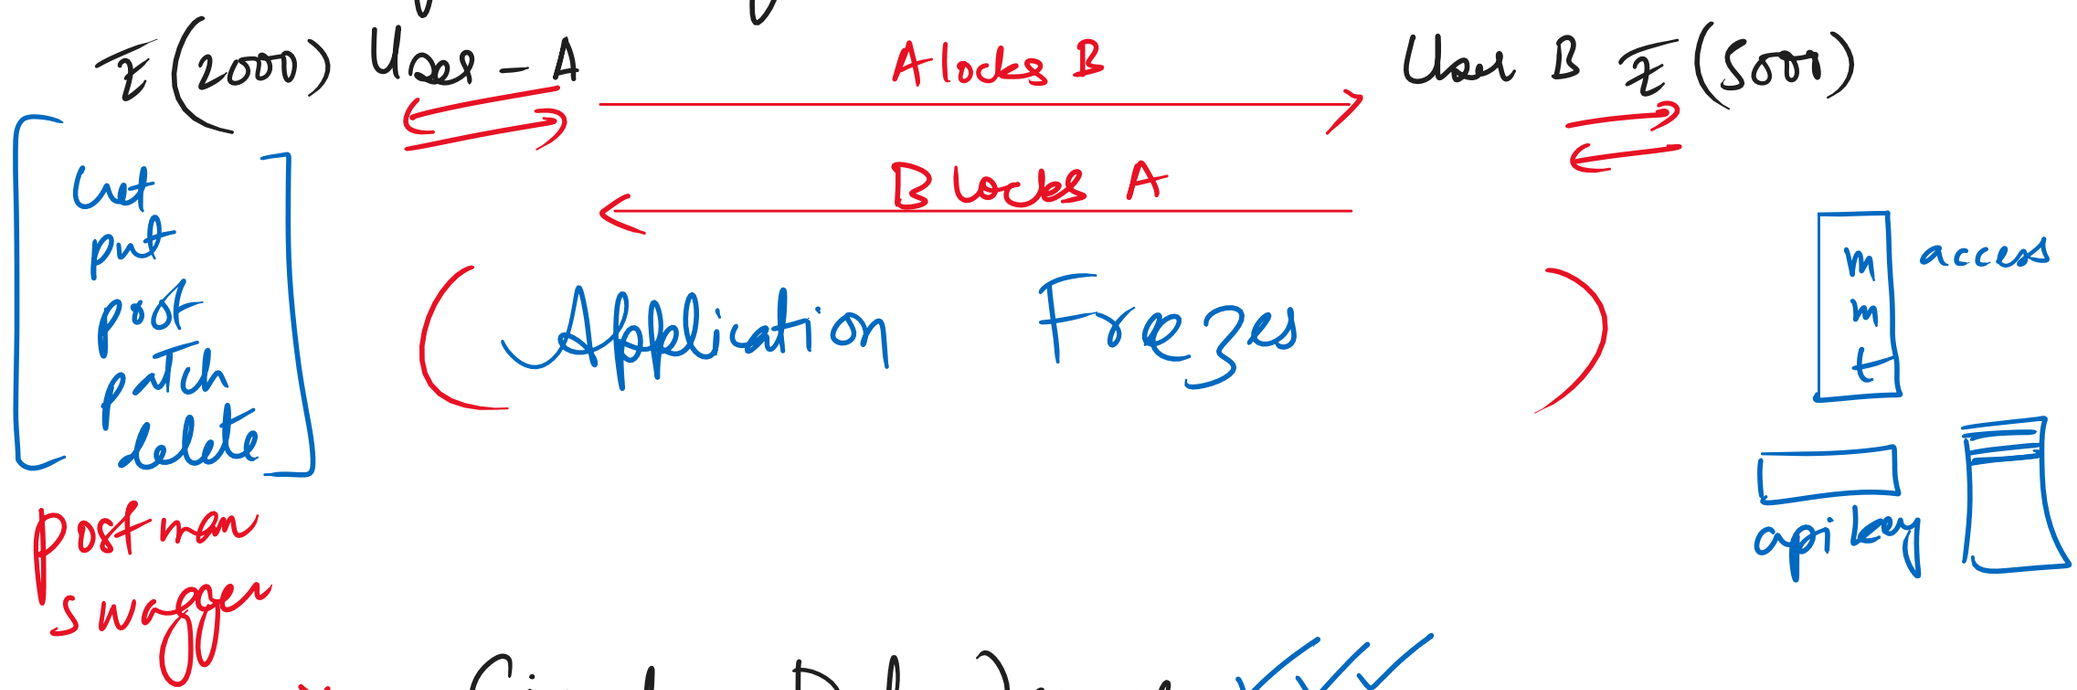
* **Race Condition:** → A race condition occurs when multiple threads try to access data simultaneously and produce incorrect results.

Reasons:

* Threads share memory
* Operations are not atomic (Not in order)
* Final output becomes unpredictable.

Deadlock (Interviewer's favourite topic)

* Deadlock occurs when two or more threads wait forever for each other's locks.



* Circular Dependency ✓✓✓
* No thread can proceed
* Program hangs — freezes

4 Nested Classes: →

(i) static
(ii) member
(iii) local
(iv) anonymous
